## BRIEF TABLE OF CONTENTS

	Pages
ACKNOWLEDGEMENTS . . . . .	iv
INTRODUCTORY NOTE . . . . .	iii + 19
· ESSAY NO. 1:   An Econometric Analysis of Brazilian Tax Structure: Elasticities, Built-in Flexibilities, and Evasion	viii + 274
ESSAY NO. 2:   The Distribution of Tax Burden in Brazil . . . . .	xiii + 249
ESSAY NO. 3:   Protection and Industrialization in Brazil and India . . . . .	iv + 45

#### ACKNOWLEDGEMENTS

This research was made while I was in Brazil, first as USAID-Vanderbilt visiting professor of economics at Instituto de Pesquisas Econômicas (IPE), University of São Paulo (1966-1968), then (overlapping) as economic advisor to the Ministry of Finance (1967-1969), and subsequently as economic advisor to Comissão Interestadual da Bacia Paran-Uruguai (better known by its short name "Bacia") (1968-69). In the development of this study, I received help from several agencies and individuals. Although it is not possible, in this brief note, to acknowledge gratitude to all of these, mention must be made of the following agencies and individuals. At first, about the agencies and institutions.

The research of Essay No. 1 was financed entirely by Instituto de Pesquisa Econômica Aplicada (IPEA), Ministry of Planning and General Coordination, through a research grant channled through ANPES, São Paulo, during the year 1968-69. Preliminary ground in this study was also broken in 1966-67 when I was still at IPE, but the study was completely restructured and redone in 1968-69 under the IPEA research grant. The actual research was carried out at Bacia where, in my capacity as the economic advisor to the 1st Vice President, I was provided liberal research and secretarial facilities, both for for the present research and the agricultural research project which was being carried out at Bacia under my supervision. The Ministry of Finance, which was especially interested in this research and the Chair of Econometrics, University of São Paulo also provided certain research facilities, including computer services. Thanks, therefore, are due, first, to IPEA and, then, to ANPES, Bacia, USAID, the Ministry

of Finance, and the Chair of Econometrics, University of São Paulo.

The research of Essay No. 2 was completed during 1967-68 when, under an arrangement of the Ministry of Finance and the Ministry of Planning and General Coordination, I was provided with two research assistants, office space, and other research and secretarial facilities at IPEA. Although the major calculation and data processing work was done at IPEA, the study was written while I was still at IPE. Thanks for this essay, therefore, go to IPEA, IPE, USAID, and the Ministry of Finance.

The research of Essay No. 3 was done in my individual capacity during the summer vacations. For this, I make acknowledgment to USAID, which gave me an opportunity to come to Brazil, without which no research on Brazil could have been undertaken.

Acknowledgements are also made to Fundação Getúlio Vargas for letting some of their as-yet unpublished data, such as those on rural family budgets, be used by me; the Graduate Center for Latin American Studies, Vanderbilt University, for contributing a part of the secretarial costs while I was a visiting professor at IPE; and Graduate Program in Economic Development, Vanderbilt University, for sundry assistance.

Coming to individuals, my especial acknowledgement goes to Antonio Delfim Netto, the Finance Minister of Brazil, for giving intellectual stimulation, constant encouragement, and either giving or making arrangements for liberal research facilities. In him I found an economist who encouraged quantitative research based on economic analysis, which I had learnt at the University of Chicago. Without his personal interest and help, I would not have had access to the research facilities provided me, among others, by IPEA and Bacia.

I benefitted most from periodical discussions with Affonso Celso Pastore and Carlos Antonio Rocca--my closest colleagues in teaching and research both at IPE, University of São Paulo and the Ministry of Finance. Rocca had to spend a lot of time and energy in working out the details and in getting certain intricacies connected with the IPEA grant cleared, once the grant was agreed upon in principle.

David Carneiro of IPEA and Albert Fishlow of the Berkeley Team at Rio de Janeiro gave useful suggestions on a number of points of the study. Occasional exchanges of views with Andrea Maneschi proved helpful in getting certain ideas clarified. The collaboration in teaching and research at IPE formally provided by the Econometrics Chair, Faculty of Economics, University of São Paulo, proved of immense help both during Luiz de Freitas Bueno's term as well as after his retirement when the Chair of Econometrics was occupied by Carlos Antonio Rocca. When Bueno retired from the University and became the 1st Vice President of Bacia, he proved even more helpful in the advancement of this research at Bacia, as already mentioned.

Thanks are also due to Michele Guerard of the Berkeley Team at Rio de Janeiro and Antonio Chagas Meirelles for supervising my research at IPEA during my absences from Rio de Janeiro.

Some parts of the research, particularly in Essay No. 2, involved an unusually large amount of data compilation and table calculation work, which being of an unsystematic nature could not be more easily or rapidly processed through the IBM computer. Such work was done by Claus Karl Joseph Muller, Lia Maria de Rezende Alt, and Sonia Maria Moraes at IPEA, Rio de Janeiro; and by Miriam B. Oelsner, Renata Rosenthal, Luciano G. Coutinho, and Elca Rosenberg at IPE, University of São Paulo. I owe my special

thanks to all of them. I am also grateful to José L. Gil and Isu Fang for their competent computer assistance, and Flávio Fausto Manzoli for liberal computer facilities.

Acknowledgements are also made to José Francisco de Camargo and Miguel Colasuonno of IPE, University of São Paulo, for providing the necessary environment for the present research.

Finally, my special thanks are due to my secretary at IPE, Elionora Budniok, for her admirable steadfastness and proficiency in typing the manuscripts. She even did some editorial work. After I left IPE and Eleonora Budniok joined the US Consulate, my typing work was taken over by Marisa Cintra Kolzer at Bacia, who also did excellent work and deserves my thanks. Occasional secretarial help by Rosa Palmira Tisi of the Chair of Econometrics, University of São Paulo, is also acknowledged.
