APRESENTAÇÃO

Apresenta-se, neste trabalho, um conjunto de tabelas contendo estimativas populacionais anuais por sexo e grupos de idade, desagregadas pelas cinco regiões brasileiras e por situação de domicílio.

As estimativas foram obtidas através do conjunto de projeções populacionais quinquenais, realizadas no IPEA/IPLAN¹ referentes às cinco regiões brasileiras por situação domiciliar. As projeções foram elaboradas pelo método dos componentes, levando em consideração o comportamento de cada um deles frente à dinâmica demográfica (fecundidade, mortalidade e migrações) separadamente, para os quinquênios 1980 - 1985, 1985 - 1990, 1990 - 1995, 1995 - 2000, 2000 - 2005 e 2005 - 2010.

Os resultados anuais apresentados foram obtidos através de uma interpolação geométrica realizada para cada grupo etário dessa projeção, considerando os pontos iniciais de cada quinquênio. A população anual de cada região consiste na soma da população masculina e feminina de cada faixa etária; este procedimento foi adotado considerada a situação domiciliar e o total regional foi o resultado desta soma. O total da população brasileira domiciliar deriva-se da soma das regiões. Salienta-se que a comparação desta soma com os resultados obtidos pela interpolação geométrica feita com o total da população brasileira foi bastante satisfatória.

1 *Para uma discussão sobre a metodologia utilizada, vide MARTINE, George, CAMARANO, Ana Amélia e BELTRÃO, KAIZÔ e NEUPERT, Ricardo in: A Urbanização no Brasil: Retrospectiva, Componentes e Perspectiva in IPEA/IPLAN. Para a década de 90, Prioridades e Perspectivas Brasília, Instituto de Planejamento Econômico e Social/Instituto de Planejamento, março de 1990.*
